

1. Very Short / 1-Mark Questions

- Name the hormone secreted by the islets of Langerhans.
- Cretinism and myxoedema result from the hypo or hyper-secretion of thyroxine?
- Expand the biological abbreviation: TSH.
- What are hormones?
- What are tropic hormones?
- Where is the adrenal gland located?
- Name a gland that secretes both hormones and enzymes.
- Define diabetes insipidus.
- Which hormone increases water reabsorption from kidney tubules?
- What do the β -cells of the pancreas secrete?
- Where is the thyroid gland located?
- Differentiate between diabetes mellitus and diabetes insipidus.
- Why is the pituitary gland called the “master gland”?
- Which endocrine gland is located at the base of the brain?
- In this list—Vasopressin, GH, TSH, ACTH, FSH—identify the odd one out and its category.
- True or False: “The pituitary gland is both exocrine and endocrine.”
- Complete: The α -cells of the pancreas secrete _____.
- Explain the term “tropic hormone.”
- Which hormone releases glucose into blood?
- Odd-one-out: ADH, TSH, NADP, ACTH.

- True/False: "Hormones are secreted directly into organs."
- Odd-one-out: Adrenal, liver, thyroid, pituitary.
- Which hormone do β -cells of Islets of Langerhans secrete?
- Fill in: Exophthalmic goitre is due to _____ thyroid hormone.

2. Descriptive / Short-Answer Questions

1. Identify the gland located just below Adam's apple.
2. Name the gland with both endocrine and exocrine functions.
3. State the location of the adrenal gland.
4. Differentiate between hormones and enzymes.
5. Name the hormone from each gland along with one of its functions:

- Thyroid
- Pancreas
- Adrenal medulla

6. Define the endocrine system.
7. Define hormones.
8. What is myxoedema?

Distinguish between exocrine and endocrine glands.

9. Differentiate between enzymes and hormones (composition and action).

3. Fill-in-the-Blanks:

1. Undersecretion of vasopressin $\rightarrow$ _____.
2. Oversecretion of thyroxine $\rightarrow$ _____.
3. Inadequate insulin secretion $\rightarrow$ _____.

4. Iodine deficiency → _____.
5. Increased insulin secretion → _____.
6. Undersecretion of glucocorticoid → _____.
7. Undersecretion of thyroxine in adulthood → _____.
8. Early thyroid atrophy → _____.
9. (i) A child who is both physically and mentally a dwarf is called _____.
- (ii) Oversecretion of thyroxine causes _____.
- (iii) Mineral in thyroxine is _____.
- (iv) Thyroid has _____ lobes.
- (v) Abnormal neck swelling in hypothyroidism is _____.
10. Vasopressin : controls urine output :: _____ : uterine contraction
11. Hypothyroidism : Simple goitre :: _____ : Exophthalmic goitre
12. Pituitary (anterior lobe) : GH :: _____ : ADH/Vasopressin
13. Endocrine gland : Thyroid :: _____ : Salivary glands

4.State the function of:

1. Thyroxin
2. Insulin
3. Oxytocin

Odd-One-Out Pairs:

1. Goitre, Cretinism, Scurvy, Myxoedema
2. Cretinism, Myxoedema, Simple goitre, Acromegaly
3. Somatotropin, GnRH, CRH, Oxytocin
4. Thyroid, Adrenal, Pituitary, Prostate
5. Adrenal, Liver, Thyroid, Pituitary

- 6.Oestrogen, Progesterone, Testosterone, Prolactin
- 7.Oxytocin, Insulin, Prolactin, Progesterone
- 8.Growth hormone, TSH, Vasopressin, LH
- 9.Cushing's syndrome, Eunuchoidism, Addison's disease, Virilism
- 10.Testosterone, Epinephrine, Progesterone, Aldosterone
- 11.Cortisone, Cortisol, Progesterone, Epinephrine
- 12.Insulin, Glucagon, Diabetes insipidus, Diabetes mellitus
- 13.Glucocorticoids, Mineralocorticoids, Corticotrophin, Sex corticoids
- 14.FSH, ICSH, Prolactin, LH
- 15.Insulin, Blood sugar, Adrenaline, Thyroxine
